The Swift-ATA is a market leading Analogue Telephone Adaptors (ATA) that allows the integration of your existing PSTN telephone service with SwiftCom, or any other Internet voice service, that supports VoIP standard protocols.

The Swift-ATA voice gateway is an Internet based one port voice gateway, that directly converts standard analogue voice into IP packet for Internet transport.

The voice gateway supports SIP and IAX2 protocols, offering one 10/100Mbps Ethernet interface, one RJ11 telephone interface, one built-in router and lifeline port, where PSTN calls can still be made even if the device is turned off or not operational.

The Swift-ATA is small device and can be widely used in SOHO, small office and enterprise branches.

Utilise your existing telephone/cordless phone to make calls via the PSTN or the Internet VoIP service.

You make the choice !!

Key Features

- PSTN Lifeline
- PPPoE Router
- Inbuilt Firewall
- Supports SIP

(Voice over IP) Standard
